Submitted (Apr.196) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: THIS PROTEIN IS ESSENTIAL FOR INITIATION OF DNA
REPLICATION AND SEPARATION OF THE SPINDLE POLE BODIES TO FORM THE
POLES OF THE MITOTIC SPINDLE. IT ALSO PLAYS A ROLE IN BUD
DEVELOPMENT. FUSION OF ZYGOTIC NUCLEI AFTER CONJUGATION AND
VARIOUS ASPECTS OF SPORULATION. REQUIRED FOR HTAL-HTB1 LOCUS
TRANSCRIPTION ACTIVATION (BY SINILARITY).
-!- SIMILARITY: Contains 7 WD repeats.

                                                                                                                                                                                               PUNCTION: Involved in maintenance of ploidy through proteasome dependent degradation of CDK inhibitor ruml and S-phase initiator cdc18. Functions as a recognition factor for ruml and cdc18, which are subsequently ubiquitinated and targeted to the 26S proteasome for degradation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    121 REKCLKRRNSSLSSNLHANKRFLFNSQSDGNKKNETFPSTNYSNVFYPNNCDSKEVASET

                                                                                                                                                                                                                   FUNCTION: Involved in maintenance of ploidy through proteasome dependent degradation of CDK inhibitor ruml and S-phase initiator cdc18. Functions as a recognition factor for ruml and cdc18, which are subsequently ubiquitinated and targeted to the 265 proteasome for degradation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      KFNESIENVSYKCLDHSPPDSVPGDFSISLVPQRNFL-YSHSSLPPKIISIDRNNRIKLD

The present invention describes an F-box motif protein of ubiquitin ligase SCF complex which promotes the ubiquitination of IkappaB or beta-catenia and is constituted by Skpl protein, cull protein and a complex (SCF complex) of Fox protein containing F-box motif and WD40 repeat motif and has the amino acid sequence of 45 residues (AAB12811) or one of two 569 residue sequences (AAB12812, which is mouse ubiquitin ligase FWD1 protein) and (AAB12813, which is man beta-transducin repeat containing protein (Deta-TroE). The F-box protein can be used for the gene therapy of colon cancer by being recombined to a virus vector.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          he present sequence represents a human beta-transducin repeat containing rotein (beta-TrcP). The protein directs proteins to the proteosome sgraddation pathways. The protein is able to interact with the Vpu rotein of human immune deficiency virus-I (HIV-I), cellular proteins sapab or beta-catenin (bC) and/or protein Skplp. The protein controls signification of phosphorylated proteins and thus their targeting to coteosomes for degradation. Depending on whether the protein controls infilted or promoted, the result may be delayed breakdown of CD4 (in 1956 of HIV-I interaction); increased degradation of mutant bC in tumour liss of HIV-I interaction); increased degradation of mutant bC in tumour list or increased bC survival (and reduced apoptosis) in Alzhehimer's Lients. The beta-TrcP protein, and its active peptide fragments, or its cleic acid, are used to screen for anti HIV-I agents (antivirals), triumour agents that disrupt cell cycle regulation or protein are also gradation in human tumour cells, and anti-inflammatory agents that srupt activation by NFkappaB. Fragments of the protein are also efful for tracting osteo-articular inflammation or acute inflammation sociated with release of tumour necrosis factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

Human beta-TrCP, an F-box/WD protein family member, has been shown to have homology to human E3 ubiquitin ligase (E3). E3 enhances ubiquitination of phosphorylated I-kappa-B, an inhibitor protein of nuclear factor kappa-B (NF kappa-B). Understanding I-kappa-B degradation via the ubiquitin pathway is useful for identifying modulators of this process for use in treating diseases associated with activation of NF kappa-B. In vitro analysis suggests that deletion of the F-box results in a protein that functions as a dominant negative molecule in vivo. Translent over-expression of edica-beta-TrCP (a deletion mutant) inhibited the degradation of endogenous I-kappa-B-alpha in stimulated Jurkat cells, resulting in accumulation of phosphorylated I-kappa-B-alpha -B can be used to screen for modulate NF-kappa-B to treat inflammatory diseases, autoimmune diseases, cancer and viral infections.
                                                                                       Polypeptide enhancing phosphorylated lkappaB ubiquitination useful for treating disorder associated with NF-kappaB activation e.g. cancer, comprising amino acid sequence of human E3 ubiquitin ligase or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RILTGHTGSVLCLQYDERVIITGSSDSTVRVWDVNTGEMLNTLIHHCEAVLHLRFNNGWM

Targetted degradation is achieved by expressing the ubiquitin ligase in a cell linked to the interaction domain of the target polypeptide and thereby recruiting the target polypeptide to the ubiquitin ligase. Such methods are useful for decreasing or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Targeting degradation of polypeptide useful for treating cancer and other proliferative disorders, involves conjugating polypeptide with ubiquitin protein ligase or inhibiting ubiquitination using organic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cleic acids encoding substrate-targeting subunits of ubiquitin gases with F-box motifs (F-box proteins) are useful for diagnosis proliferative and differentiated related disorders by measuring sense expression. Calls expressing such proteins or air fragments are useful for screening compounds. The compounds agonists or antagonists, which are useful for treating a biferative or differentiative disorder in a mammal such as ast, ovarian and prostate cancer and small cell lung carcinoma lalso major opportunistic infections, immune disorders, diovascular diseases and inflammatory disorders. FBP protein, logs, derivatives and their subsequences, anti-FBP antibodies also useful in diagnosis of the disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Score 3034; DB 21; Length 569; 100.0%; Pred. Degrading any desired protein in a cell is set of preventing or treating diseases caused by the presence of mormal amount of the specific polypeptides, for drug diseovery and its gene therapy. Diseases treated include cancer, by degradation of icoproteins, Huntington's disease, other proliferative disorders and croproteins. The method provides a quick and easy its changes in the method provides a quick and easy leterative to gene knockout technology. The traget polypeptide can degraded at all stages, or a specific stage, of development in the 1 MDPAEAVLQEKALKFMNSSEREDCNNGEPPRKIIPEKNSLRQTYNSCARLCLNQETVCLA MDPAEAVLQEKALKFMNSSEREDCNNGEPPRKIIPEKNSLRQTYNSCARLCLNOETVCLA STAMKTENCVAKTKLANGTSSMIVPKORKLSASYEKEKELCVKYFEOWSESDOVEFVEHL STAMKTENCVAKTKLANGTSSMIVPKORKLSASYEKEKELCVKYFEOWSESDOVEFVEHL ISOMCHYOHGHINSYLKPMLQRDFITALPARGLDHIAENILSYLDAKSLCAAELVCKEWY RVTSDGMLWKKLIERMVRTDSLWRGLAERRGWGQYLFKNKPPDGNAPPNSFYRALYPKII RVTSDGMLWKKLIERMVRTDSLWRGLAERRGWGQYLFKNKPPDGNAPPNSFYRALYPKII QDIETIESNWRCGRASLQRIHCRSETSKGVYCLQYDDQKIVSGLRDNTIKIWDKNTLECK QDIBTIBSNWRCGRHSLQRIHCRSETSKGVYCLQYDDQKIVSGLRDNTIKIWDKNTLECK RILIGHTGSVLCLQYDERVIITGSSDSTVRVWDVNTGEMLNTLIHHCEAVLHLRFNNGMM RILIGHIGSVLCLQYDERVIITGSSDSTVRVWDVNTGEMINTLIHHCEAVLHLRFNNGMM VTCSKDRSIAVWDMASPTDITLRRVLVGHRAAVNVVDFDDKYIVSASGDRTIKVWNTSTC VICSKDRSIAVWDMASPTDITLRRVLVGHRAAVNVVDFDDKYIVSASGDRTIKVWNTSTC **EPVRTLNGHKRGIACLOYRDRLVVSGSSDNTIRLWDIECGACLRVLEGHEELVRCIRFDN** EFVRTLNGHKRGIACLQYRDRLVVSGSSDNTIRLWDIECGACLRVLEGHEELVRCIRFDN KRIVSGAYDGKIKWDLVAALDPRAPAGTLCLRTLVEHSGRVFRLQFDEFQIVSSSHDDT KRIVSGAYDGKIKVWDLVAALDPRAPAGTLCLRTLVEHSGRVFRLQFDEFQIVSSSHDDT ISOMCHYOHGHINSYLKPMLORDFITALPARGLDHIAENILSYLDAKSLCAAELVCKEWY Gaps . 0 100.0%; Score 3034; DB 21; Length 569; 100.0%; Pred. ```
he present sequence is cell signalling protein-12 (CSIGP-12) encoded y cDNA obtained from Incyte clone 323949 of COLANCTO1 library. It is xpressed in musculoskeletal, gastrointestinal and nervous tissues and is cond to be homologous to beta-transducin repeats containing rotein. Fragments of CSIGP encoding nucleic acid can be used as ariants. Recombinant CSIGP can be produced in host cells by transforming hem with generically appliered vectors. Agonists or allelic sed in the treatment of cell proliferative and inflammatory disorders secint with decreased or increased CSIGP expression. CSIGP is used in the dispension and treatment of cell proliferative and inflammatory disorders secint edangosis, prevention and treatment of cell proliferative disorders its days between the dispension of cell proliferative disorders is exercisely expression. CSIGP is used in the days of the dispension of cell proliferative disorders is carried arteriosis, carrier, hepatitics and inflammatory is corders like AIDS, Addison's disease, multiple sclerosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0

The invention relates to screening compounds useful for the treatment of proliferative or differentiative disorders comprising detecting a change in the activity of Skp2 (F-box protein). The method is useful for screening compounds for the treatment of proliferative or differentiative disorders, particularly cancer. These compounds include small molecules, or compounds or derivatives or analogues of the new ubiquitin ligases. The compounds are useful for treating diseases such as cancer (e.g. breast cancer, prostate cancer or ovarian cancer, lymphoma, small cell lung cardinoma or parathyroid adenomas), major opportunistic infections, immune disorders, certain cardiovascular diseases or inflammatory disorders. This sequence represents an F-box protein (FBP) relating to

569 AA;

Sequence

Screening compounds for treating proliferative disorders, e.g. breast cancer or prostrate cancer, infections or immune disorders, comprises detecting a change in the activity of Skp2 with either p27 or Cks1

the protein-protein interactions and useful for treating obsetty and metabolic disorders e.g. non-insulin dependent diabetes mellitus, by DDM. The compound isolated by the method is useful for treating and preventing obsetty or metabolic diseases. The interactions between the proteins of the complex further define a set of selected interacting domains, SID. The present sequence represents a member of the protein hybrid assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RVTSDGMLWKKLIBRMVRIDSLWRGLABRRGWGQYLFRNKPPDGNAPPNSFYRALYPKII

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
                                                                                                                                                                                                                                                                                                                       le invention relates to methods of altering the polypeptide levels in a all, using proteins selected from S-phase kinase associated proteins 1 d 2 (SRP1, SRP2), SRP2-like proteins (STB) and CUL-1 (a member of the illin/ CDC53 family of proteins). The method is useful for altering the vel of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or BG1-2 ) Mypeptide in a cell. SRP2 and SKP2-like protein levels are useful for tecting tumours, and in monitoring tumor treatment in a mammal. Agents eating tumours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is one of 251 novel human polypeptides encoded by a bone marrow-expressed polymucleotide. The polymucleotide and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polymucleotide or the protein it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel bone-marrow-expressed polynucleotides and polypeptides, useful for treating e.g. cancer and immune deficiency disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, bone marrow, antiinflammatory, cytostatic, neuroprotective, antiviral, antibacterial, antifungal, anti-HIV, haemostatic, immunosuppressive, gene therapy, cytokine cell proliferation, cell differentiation modulator, immune disorder; infection, cancer; human immunodeficiency virus, HIV, autoimmune disorder; haemophilia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can used as nutritional sources or supplements and in the screening chemical compounds as potential drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chen R, M.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78313-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other oytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoissis regulating activity, insue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The F-box proteins are a family of ubiquitin ligases (SCF ubiquitin ligases) which can be used for the targetted degradation of a target polypeptide in vivo. Targetted degradation is achieved by expressing the ubiquitin ligase in a cell linked to the interaction domain of the target polypeptide and thereby recruiting the target polypeptide to the ubiquitin ligase. Such methods are useful for decreasing or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ubiquitin ligase; SCF; F-box protein; targeted degradation; destabilisation; proteolysis; drug discovery; gene therapy; cancer; oncoprotein; Huntington's disease; gene knockout; delivery systems;

noreasing the level of a target polypeptide and for creating and xpressing a destabilized polypeptide which is subjected to SCF seliated proteolysis. Degrading any desired protein in a cell is setul for preventing or treating diseases caused by the presence of bnormal amount of the specific polypeptides, for drug discovery and or gene therapy. Diseases treated include cancer, by degradation of ncoproteins, Huntington's disease, other proliferative disorders and croproteins. The method provides a quick and easy literative to gene knockout technology. The target polypeptide can edgraded at all stages, or a specific stage, of development in the

That exhibit a cativity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodiatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and 2111 (AAK52582) and 3666 from the sequence listing 61 MPSLRCLYNPGTGALTAFMNSSEREDCNNGEPPRKIIPEKNSLRQTYNSCARLCLNQETV CLASTAMKTENCVAKTKLANGTSSMIVPKORKLISASYEKEKELCVKYFEQWSESDQVEFV BHLISOMCHYOHGHINSYLKPMLORDFITALPARGLDHIAENILSYLDAKSLCAAELVCK EWYRVTSDGMLWKKLIERMVRTDSLWRGLAERRGWGQYLFKNKPPDGNAPPNSFYRALYP 1 MDPABAVLQBKALKFMMEFRSWCPGWNTMARSRLTATSTSRVQCSMPRSLWLGCSSLADS --- FMNSSEREDCNNGEPPRKIIPEKNSLRQTYNSCARLCLNQETV Gaps polypeptides with cytokine-like activities C, Cao Y, Wang ZW; 63; DB 22; Length 632; Indels Tang YT, Liu C, Drmanac RT, Asundi V, Zhou P, Xu ( Zhao QA, Wang D, Wang J, Zhang J, Ren F, Chen R, Xue AJ, Yang Y, Wejhrman T, Goodrich R; Score 2992.5; DB 22; Pred. cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissus growth factor activity, immunomodiatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 7, Apply Sequence 10, Apply Sequence 10, Apply Sequence 10, Apply Sequence 14, Apply Sequence 16, A
